Subject: HEAT TREATED FVIII

Date: 18 January 1985

I can now confirm that all new batches of FVIII should be manufactured using the modified formulation which incorporates sucrose at 2%.

I have provisionally agreed with Dr Cash that this material will be available for clinical evaluation within six weeks.

Since this represents an on-going routine commitment which may affect resources in some areas (particularly pasteurisation) I would be grateful if we could meet as soon as possible to confirm production and QA arrangements.

I will arrange a meeting.
