Dear Frances

HTLV III SEROCONVERSIONS IN SCOTLAND

John Cash tells me that you have no information relating to haemophilic seroconversions in Scotland following the use of heat treated FVIII.

I therefore enclose a copy of a letter from Dr Forbes (Haemophilia Director) which details these cases. You will of course appreciate that these cases are equivocal and there is a general consensus that the seroconversions are related to previous treatment with untreated material of either commercial or NHS origin. I recall that this data was presented by Dr Forbes at the recent NIBSC meeting.

With kind regards.

Yours sincerely

R J PERRY  
Director
