LATEST AIDS FIGURES FOR SCOTLAND

26 JUN 1987

Ref: 03

The Scottish Home and Health Department today released the latest AIDS figures for Scotland. These show that up to the end of May there were 20 cases in total, of whom 12 have died. The corresponding figures for the end of April 1987 were 20 cases and 11 deaths.

In the United Kingdom as a whole, there were 791 cases, of whom 444 have died. The corresponding UK figures for the end of April were 750 cases and 420 deaths.

Table A attached shows the Scottish figures, and Table B the UK figures, divided into categories of patients. These show that 14 of the 20 cases for Scotland are homosexual or bisexual males, and that 686 of the 791 for the United Kingdom fall into the same category.

NOTES FOR EDITORS

Epidemiological surveillance of the Acquired Immune Deficiency Syndrome (AIDS) was begun at the Communicable Disease Surveillance Centre in collaboration with the Communicable Disease (Scotland) Unit in 1982. The figures announced today are the cumulative totals of cases reported. The case definitions of AIDS compiled by the US Centre for Disease Control in Atlanta, Georgia are used for classifying and recording the UK case reports.

News releases setting out the latest Scottish and UK figures are issued by the Scottish Information Office at monthly intervals.
