Dear Bob

Enclosed are the data to hand on haemophiles infused with the 28-80 trial material. We have done 4 infusions as follows

- 1) [REDACTED] - BTS assays with local depleted plasma show discrepancy from Haematology ones with Diagen substrate. BTS will check by assay with Diagen
  - 2) [REDACTED] - BTS - assays using Diagen substrate
  - 3) [REDACTED] -
  - 4) [REDACTED] -
- } to be assayed this week. A. McGill will send you VIII:C results direct

Any queries you have on clinical monitoring sheets may be answered by Dr Susan Howe. We will do VIII:C assays when possible.

I understand Glasgow have done 2 or 3 infusions successfully (from Dr Forbes). Your best contact there may be Dr Gordon Lowe in Dept. Medicine. For above half-life on (1) & (2) looks reasonable, recovery below and ~~but~~ solubility rather long. Hope this helps - it's all I have at the moment

Chris Prouse.
