Dr. J. K. Smith  
Plasma Fractionation Laboratory  
Churchill Hospital  
OXFORD

Dear Jim,

Here are copies of some recent PFC "publications" which may be of interest:-

- (1) A copy of the slides used for my presentation at ISBT (March '84).
- (2) A report published in Research Disclosure before we learned that Cutter had already patented virtually everything.
- (3) A paper given at the 1983 WFH meeting (Stockholm) which gives some data on our work on citrate/ $Ca^{2+}$  effects.

We now have our new CSVM microprocessor controlled modules working in Production. This is the result of a 4 year collaboration with the small control company that I mentioned on the phone.

Their address is:-

Scomag Ltd, Crosshill Street, Motherwell.

One question I've been meaning to ask you; what are the freeze drying conditions for your new FVIII concentrate (especially during primary drying). We have some preliminary data that suggests that drying conditions may be particularly critical for the subsequent sensitivity of both protein and virus components to heating (not unexpected).

Best wishes.

Yours sincerely,

PETER R. FOSTER
