From: Dr R Stewart

Date: 23 October 1990

Subject: Self Sufficiency in Factor VIII

David,

According to the data which I recently have received from the Haemophilia Directors no Prophilate was used in the Scotland in September. Thus, allowing for the the 'specialised use' of Monoclate in 'allergics' and 8Y in vWD, it can be regarded that self sufficiency in normal Factor VIII was achieved in this month.
