Royal Infirmary  
Edinburgh

Dear Christopher,

HAV : COAGULATION FACTOR CONCENTRATES.

Thank you for your letter of the 19th of October.

The reported transmission of HAV in factor VIII concentrates was discussed at our product development group on the 28th October.

I'm pleased to advise you that it was decided that effort should be made to expedite developments which will enable PFC to introduce a terminal dry heat procedure.

You can rest assure that we are keeping this matter under close surveillance.

Kindest Regards

Yours sincerely

*J. D. Cash*
